Answers

Part I

1 5 TTTTF 6 10 FFFFT

Part II

1 5 BCADD 6 10 BBCCD 11 15 BCCBD

Part III

- 1. Encapsulation 2.extends 3.instance 4.Instanceof 5.new
- 6. Static 7.iteration 8.super 9.Protected 10.import
- 11.return 12.syntax 13.If-else 14.Immutability 15.stack

Part IV

- 1. +, -, *, /, %, &&, ||, &, |, ==, etc;
- 2. Overrided methods use dynamic binding. We can write a public getter method for all the classes, then use superclass variables to call the getter to access subclass objects' private instance variables polymorphically.
- 3. QAQ, string, \$_\$abc
- 4. x,y,p,q,g
- 5.
- (1) Compile error.
- (2) The generic parameter may accept classes that don't implement compareTo method.
- (3) Set upper bound for generic parameter T. i.e. <T extends Comparable<T>

Part V

- 1.
- (1) true
- (2) loca < n*m or loca < a.length-1
- $(3) \operatorname{diry}[\operatorname{dir}]$
- (4) res[locx][locy] = a[loca]
- (5) dir = (dir + 1)%4
- 2.
- (1) 1
- (2) j < i

```
(3) a[j] < a[i]

(4) f[i], f[j] + 1 or f[j] + 1, f[i]

(5) ans, f[i] or f[i], ans

3.

Codes for reference
```

```
public class Human
2
   {
       int health;
3
       double temperature;
4
       public Human(int health)
5
       {
6
            this.health=health;
7
            this.temperature=37.0;
8
       }
9
       public double contact(Virus virus)
10
11
       {
            int threshold=virus.virulence;
12
            if(virus.isCoronavirus)
13
                threshold+=20;
14
            if(health==threshold)
15
                health-=10;
16
            else if(health<threshold)</pre>
17
            {
18
                health-=40;
19
20
                temperature+=1.5;
21
            }
22
            return temperature;
23
       }
24 }
25
```

```
26 class Virus
27
  {
       boolean isCoronavirus;
28
       int virulence;
29
       public Virus(boolean isCoronavirus,int virulence)
30
       {
31
           this.isCoronavirus=isCoronavirus;
32
           this.virulence=virulence;
33
34
       }
35
  }
```
